

PROJECT MANAGEMENT

PROFESSIONAL ORGANIZATION
AND SUPPORT IN ALL PROJECT PHASES

YOUR ADVANTAGES AT A GLANCE:

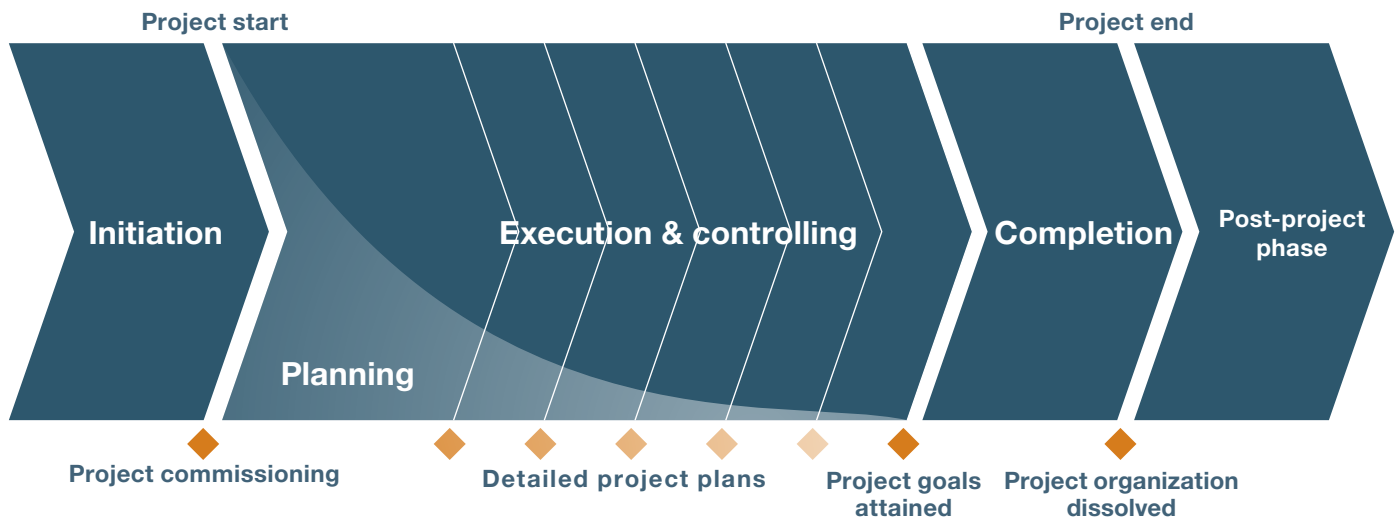

- Compliance with project goals, budgets, time schedules and quality standards
- Early identification of shortages and deviations for an early initiation of counter-measures to ensure the project success
- Transparent and neutral reporting
- You can focus on your core competencies and your operative daily business

To Ehrhardt + Partner Consulting, professional and successful project management means consequently implementing the customer's project goals by sticking to time schedules and budgets and ensuring the required quality.

Our clients assign us with the entire project management, be it a new warehouse or a warehouse modernization. This way, they can focus on their own core competencies and their operative daily business.

With Ehrhardt + Partner Consulting, you can optimize your internal logistics from goods receiving to good dispatch, with an independent and holistic approach. For us as your neutral partner, independence from suppliers and individual project implementation are a matter of course.

We would be glad to support you in planning and executing a material flow and process analysis. Afterwards, we will be at your disposal as a competent, neutral and independent partner for the implementation.

IMPLEMENTATION PHASE – CALL FOR TENDERS

After the rough and detailed planning, the preferred variants for the logistics technology are the basis for a call for tenders. We will support you in the tendering process, the variant comparison (after the call for tenders) and the assignment. The average saving potential compared to an individual awarding of contracts without a call for tenders is between 10% and 20%.

IMPLEMENTATION PHASE – OBJECT MONITORING

During the project duration, we are responsible for the coordination of your project and focus on the quality of the results as well as the compliance with time schedules and budgets. After the implementation of the overall system, our logistics experts carry out and supervise the performance and availability tests, the acceptance process and the documentation of the completed work. This allows our clients permanent transparency and traceability throughout the project.

POST-PROJECT PHASE

We will remain at your disposal, also after the implementation. If required, we can establish a maintenance concept to continuously check the overall system. But also beyond this, we will be your competent partner for all questions concerning your logistics.

SERVICES FROM ONE SOURCE – ENSURING THE PROJECT SUCCESS

- Partner on the customer's side
- Independent and neutral
- Holistic and individual project management
- Transparent and objective
