## CONSULTING SUITE –

the online optimisation platform for logistics

### The **EPG CONSULTING SUITE** at a glance

- ✓ Cost savings from the first use
- ✓ Logistics optimisations regardless of time and location
- ✓ Digital solution with individual support from the advisers
- ✓ Intuitive and easy to operate
- ✓ Can be linked to the higher-level WMS or ERP system

### Become your own adviser: fast, independent and sustainable logistics optimisations with the web solution

The Consulting Suite is the first online optimisation platform for logistics. The web applications offers customers the unique option of optimising their existing logistics and warehouse processes independently using an attractive interface – regardless of time and location. With the consulting-as-a-service solution, users benefit from a significantly leaner process flow and great time savings for their individual logistics optimisation project. This is because there is no need for often expensive and time-consuming inquiries to an external adviser. With a direct link to a higher-level WMS/ERP system, the Consulting Suite delivers recommended actions with just a click. For more flexibility, fast optimisation suggestions and long-term savings – **all from the first use.**

## Turning data into decisions

The Consulting Suite helps companies to drive the digitalisation and process automation of their logistics optimisations. Customers receive personal login credentials for using the online optimisation platform. On the web interface, users have access to different business apps for their individual warehouse and logistics optimisations, including a heat map analysis and shopping basket analysis or an inventory optimisation – and receive specific action recommendations immediately after the analysis. That is how to turn data into decisions.

## Three steps to optimisation

The start page of the Consulting Suite offers an overview of the available functions. After individually selecting the app, simply upload the existing data in the second step – or use the data transfer via an interface. The results and the specific recommended actions will then be shown in a clear format. Just become your own logistics adviser!

More information and a non-binding test access are available at [www.epg.com/consulting-suite](http://www.epg.com/consulting-suite).

1. Select app  
and read in data set

2. Set parameters  
and start analysis

3. Receive results and recommended  
actions at the press of a button

### The advantages at a glance:

- ✓ **Cost savings** from the first use
- ✓ **React to short-term changes** regardless of time and location
- ✓ **Long-term benefit instead of one-off advice**
- ✓ **Independent optimisations** without an expensive, time-consuming large project
- ✓ **Fast implementation of short-term and long-term optimisation strategies**
- ✓ **Easy data entry** using the interface or upload function
