

EPG ONE

CHECKLIST & INSPECTION

The app for workflow and process documentation

EPG ONE™ Checklist & Inspection

- ✓ Stand-alone solution for process documentation
- ✓ Greater transparency for internal documentation
- ✓ Increased efficiency plus time savings for all processes
- ✓ Compatible with EPG and SAP subsystems
- ✓ Integrated Lydia® Voice – Check-by-Voice
- ✓ Minimized error rate for internal processes

The paperwork for logistics ranges from a shipper's delivery bill or a freight forwarder's waybill to all the documentation for incoming goods. All in all, there are lots of pieces of paper that can cause real frustration for logistics operators on a daily basis. But how can we cut down on all the paper, especially when documenting processes? How can we make process documentation more transparent and more efficient? How can we digitalize workflows?

As an app, EPG ONE can be used **100% offline**

The quick and simple answer to all these questions is the EPG ONE app Checklist & Inspection. It is a high-performance, complete solution for workflow and process documentation that can digitalize all your documentation processes, saving you time, but also increasing the accuracy of the data you record, while reducing costs as well!

Simplifying and accelerating processes with Checklist & Inspection

Whether warehouse logistics, transport management, air freight or rail transport, logistics operators deal with a lot of documentation processes on a daily basis, ranging from incoming goods inspection, through ground handling to vehicle inspections. These processes usually use paper-based checklists to document inspections and checks. In addition to the time involved, manual processing also means a high error rate and a low level of transparency. As a cloud-based app EPG ONE Checklist & Inspection solves both problems at once. The stand-alone solution provides powerful ways to digitally document your entire process landscape. This means that you can easily create custom checklists and logs using list templates and include, for example, required fields, target/actual comparisons and recordings of products. The key benefit? Tasks are openly scalable and can be processed in parallel. Any documentation can also be exported and saved locally for other uses. Using Checklist & Inspection, customers reduce the complexity within their processes, as time-consuming and expensive work steps with paper printouts and lists are no longer necessary.

Checklist & Inspection as interface in the EPG system landscape

Checklist & Inspection is compatible with all the solutions in the EPG software suite and gives customers the greatest

possible versatility and potential to increase efficiency. For example, data for goods incoming processes can be automatically transferred from DOCK to the EPG ONE app in real time, avoiding the need for any manual steps.

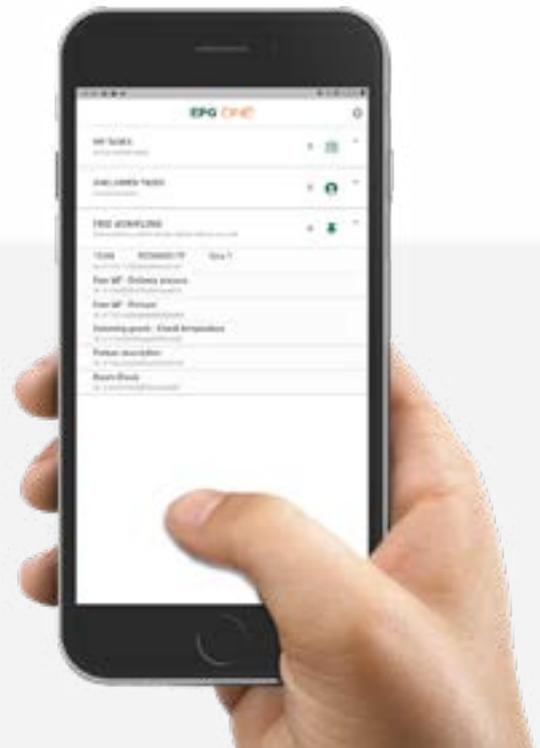

Checklist & Inspection is also compatible with other common systems, such as SAP. As a digital solution for process documentation, Checklist & Inspection has potential for lots of other industries besides logistics, such as maintenance and inspection and facility management.

Greater efficiency by integrating Lydia® Voice

Flexible and efficient solutions are needed in the dynamic market environment of logistics, where intralogistics processes in particular have to get faster and faster - while at the same time becoming more transparent and agile. EPG ONE app meets the high demands of the industry and, with the planned integration of the smart Lydia® Voice assistant, is revolutionizing digital process and workflow documentation. From orders through checks and logs to checklists, you can do it all with Checklist & Inspection and intuitive voice control. It eliminates superfluous hand movements you would need to use your mobile device, which increases the efficiency and productivity of your employees.

The benefits at a glance

- ✔ Greater efficiency and transparency for documentation
- ✔ Paper-free data entry via mobile app
- ✔ Simple, transparent process documentation
- ✔ Highly customizable
- ✔ Can be used in a range of different industries
- ✔ The mobile app can be used 100% offline

Use cases in logistics

Warehouse logistics + transportation management

Incoming and Outcoming goods

Inspection of incoming and outgoing goods. Digital checklists to carry out a thorough inspection of the transported goods and document any damage, missing parts, and so on.

Delivery

For forwarders, carriers, drivers, shippers, consignees. Guidance from the departure check to the proof of delivery. Every touch is documented automatically. That way, drivers can easily prove that they've completed all their tasks.

Maintenance + Inspection

All kind of inspections (warehouse, road, rail, sea, air) e.g. technical systems, transport vehicles, forklifts, AGVs, devices, components, equipment and ship and aircraft maintenance.

Facility Management

Send tasks to your employees' mobile devices from the EPG ONE™ Checklist and Inspection web portal. Detailed workflows ensure that every task is properly completed and documented at the same time. Additional documents such as inspection plans or room lists can be linked to every order.

Use cases in other industries

Create your own workflows and tasks!

Construction and Contracting

Site management, construction and documentation: You control, coordinate and monitor the construction work one step at a time and document everything virtually and automatically. You can assign jobs to in-house and contractors' employees.

Hospitality / Healthcare

Hospital Housekeeping Checklist to identify hospital units and rooms to be cleaned. Accident reports can be used by fleet managers to report all the details of the incident. Patient Surveys help to measure the quality of hospital care.

Mobile field service

Coordinate appointments and generate trips for your mobile field service staff and provide maintenance manuals. All kind of field service e.g. auto glass, vending machine maintenance, electrical appliances, TV sets, building equipment, heating systems, IT services, plumbing, telecommunication etc.

Agriculture

Carry out a check on an agricultural holding, easy create your checklist you need. Service your tractor regularly and detect damage early on.
