

CONSULTING SUITE - THE ONLINE OPTIMISATION PLATFORM FOR LOGISTICS

THE CONSULTING SUITE AT A GLANCE:

- ✓ Cost savings from the very 1st use
- ✓ Logistics optimisation independent of time and location
- ✓ Digital solution with individual support by the EPC consultants
- ✓ Intuitive and easy to use
- ✓ Connection to the superordinate WMS or ERP system possible

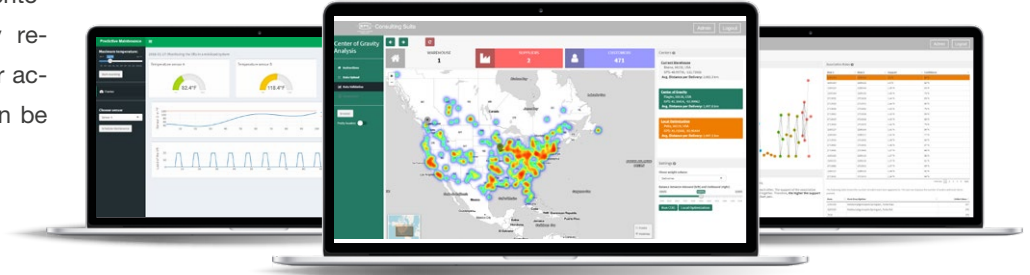

BECOME A CONSULTANT YOURSELF: WITH THE WEB SOLUTION FOR QUICK, INDEPENDENT AND SUSTAINABLE LOGISTICS OPTIMISATIONS

The Consulting Suite is the first online optimisation platform for logistics. The web application offers customers the unique opportunity to independently carry out optimisations in their existing logistics and warehouse processes in an attractive interface – independent of time and location. With the Consulting-as-a-Service solution, users benefit from a significantly streamlined process flow and enormous time savings for their individual logistics optimisation project as there is no longer the need to make often time-consuming and costly requests to an external consultant. The Consulting Suite provides recommendations for action at the click of a buttons thanks to the direct connection to a superordinate WMS/ERP. For increased flexibility, quick optimisation suggestions and long-term savings – **and all this from the very 1st use.**

DECISIONS ARE MADE BASED ON DATA

Companies can use the Consulting Suite to drive forward the digitalisation and process automation of their logistics optimisations. The customer receives personal login data to use the online optimisation platform. On the web interface, users have access to various business apps for their individual warehouse and logistics optimisations – including, for example, a heat map and shopping basket analysis or inventory optimisation – and immediately receives specific recommendations for action after the analysis. Decisions can be made this way.

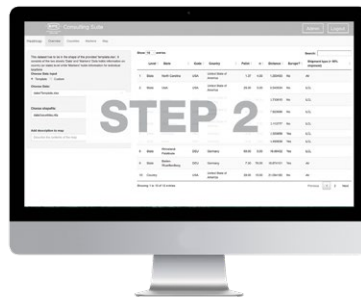

OPTIMISATION IN THREE STEPS

The Consulting Suite provides an overview of the available functionalities on the start page. After selecting the app individually, simply upload the existing data in the second step – or use the data transfer via interface. The results and the specific recommendations for action are then clearly presented. Easily become a logistics consultant yourself!

You can find more information and non-binding test access at www.epg.com/consulting-suite

1. Select app and import data record

2. Set parameters and start analysis

3. Get results and recommendations for action at the push of a button

BENEFITS AT A GLANCE:

- + **Cost savings from the very 1st. use**
- + Respond to change at short notice independent of time and location
- + **Long-term benefits** instead of one-off advice
- + **Independent optimisations** without a time-consuming and costly large-scale project
- + **Rapid implementation** of short-term and long-term optimisation strategies
- + **Easy data input** via interface or upload function
