

MAXIMUM EFFICIENCY FOR SHIPPING –
SO YOUR GOODS ARRIVE SAFELY

LFS.iss

international shipping system

- Standalone software for shipping logistics
- Not dependent on the warehouse management system you are using
- Connects to various CEP service providers
- Handles the dispatch of goods cost-effectively
- Integrates additional shipping methods and services quickly and flexibly
- Hosted in the private cloud at the EPX data center

Run all your shipping logistics with just one tool. Find the best route and the right CEP provider quickly and easily. Whatever WMS you are using. And all deployed in a private cloud, as a secure, high-performance system for maximum availability. This is LFS.iss, a standalone solution for the efficient and cost-effective management of your outgoing goods processes.

High performance and maximum availability

The International Shipping System is available as a private cloud solution. E+P provides the necessary infrastructure at the data center of its subsidiary EPX – Ehrhardt + Partner Xtended, and sets up the connections to the various CEP providers.

Engineered
by EPG

Routing:

The integrated shipping system starts planning shipment soon after the order is received. LFS.iss communicates directly with the higher-level WMS for this purpose. All the relevant information for the order is used to generate a routing code for optimal routing, which is reported back to the WMS.

Shipping label:

After the goods are picked and packed, LFS.iss selects the right routing information based on the relevant order data. A barcoded shipping label is then created with all the applicable data, such as address, weight, number of packages, routing code and shipping unit number – always taking into account the specific requirements of each CEP provider.

EDI:

For dispatch, LFS.iss generates proof of delivery for each specific parcel delivery service. The system also records and makes all the information available, such as the name of the collecting agent and the license plate of the vehicle. All the data is transferred quickly and securely to the service provider via EDI.

BENEFITS AT A GLANCE:

- Greater efficiency and transparency for shipping processes
- Freight shipment lists for specific parcel service providers
- Preparation of import-function and calculation of routing codes
- Conversion to CEP-specific data formats, such as Edifact Iftmin, Fortras, XML, etc.
- Fast and secure data exchange (EDI) via FTP, SFTP, etc.
- Private cloud solution reduces operating costs
- 24/7 availability
