

**LFS.glass allows full transparency in the warehouse**

## **First augmented reality data glass in use with the customer**

**At the latest since the introduction of Google.glass, augmented reality is one everyone's lips. Ehrhardt + Partner (E+P) has now made this technology available for logistics and has developed as solution that makes the warehousing processes significantly more efficient and secure. In the logistics center of EBL - Ehrhardt + BOMAG Logistics, the first E+P App for the LFS.glass is now used in practice.**

With LFS.glass, the user is able to start an inventory inquiry using the data glass. The recognition of QR codes with the help of the augmented reality glasses is already being used with success. "We are convinced that LFS.glass can contribute a lot to the development in logistics", says Marco Ehrhardt, managing partner of E+P. Already in 2001, E+P proved their status as leading innovators in logistic with the implementation of the first successful Pick-by-Voice project in the German-speaking area. "Today, we note that the technology developed back then has become a standard in intralogistics", Marco Ehrhardt continues.

With LFS.glass, E+P pushes the use of augmented reality solutions for logistic processes, the objective being to sustainably develop warehouse logistics. Research is continuing at full pace and the logistics experts can expect further path-breaking functions of the LFS.glass for intralogistics.
